## 13-Year Old Gets Relief from Mysterious Illness

After undergoing a routine surgery in 2011, my son (13 yrs. old at the time) developed complicated medical issues and severe, unexplained pain. After extensive medical testing, multitudes of consults with specialists and a plethora of medicines, I began to focus on holistic remedies, since traditional medicine was obviously not working. My son wasn't sleeping, was barely eating and had missed 2 years of school. After only 1 month of chiropractic care, he began sleeping better and was beginning to eat regular meals again. I began to see a huge difference in him and he was able to live his life a bit, instead of staying in bed each day. He got back to school and was able to participate in his first organized sport in over 3 years. As I continue to seek reasons for his condition, he continues to get chiro care weekly. I feel that the adjustments have recalibrated his system and he would have continued to diminish medically if not for Dr. D's magical hands! - Melissa
